Optimizing Amazon Sales: A Comprehensive Analysis Using NumPy and Pandas

Introduction to Amazon Sales

In this presentation, we will explore **optimizing Amazon sales** through a comprehensive analysis using **NumPy** and **Pandas**. These powerful tools will help us to efficiently process data, uncover insights, and enhance sales strategies for better performance in the competitive Amazon marketplace.

Importing Required Libraries:

```
[ ] import numpy as np
    import pandas as pd
    import seaborn as sns
    import matplotlib.pyplot as plt
```

Importing the dataset:

```
[ ] sales_data = pd.read_csv('SALESDATA.csv', parse_dates=['DateKey','Invoice Date', 'Promised Delivery Date'])
    sales_data
```

	CustKey	DateKey	Discount Amount	Invoice Date	Invoice Number	Item Class	Item Number	Item	Line Number	List Price	Order Number	Promised Delivery Date	Sales Amount	Sales Amount Based on List Price	Sales Cost Amount	Sales Margin Amount	Sales Price	Sales Quantity	Sales Rep	U/M
0	10000481	2017-04-30	-237.91	2017-04-30	100012	NaN	NaN	Urban Large Eggs	2000	0.00	200015	2017-04-30	237.91	0.00	0.00	237.91	237.910000	1	184	EA

Understanding Amazon Marketplace

The **Amazon marketplace** is vast and dynamic. To succeed, sellers must understand **consumer behavior**, **trends**, and **competition**. Utilizing data analysis tools like **NumPy** and **Pandas** enables sellers to extract valuable insights from sales data, driving informed decision-making.

Data Collection Techniques

Effective **data collection** is crucial for analysis. Sellers can gather data from **Amazon Seller Central**, **web scraping**, or utilizing **APIs.** This data forms the foundation for our analysis, allowing us to identify patterns and opportunities for sales optimization.

```

Using NumPy for Analysis

With **NumPy**, we can perform efficient numerical computations on sales data. This library allows for **array manipulations**, statistical calculations, and data transformations, which are essential for analyzing trends and forecasting sales performance effectively.

Leveraging Pandas for Dataframes

Pandas is instrumental in handling structured data with its **DataFrame** capabilities. It allows for easy data manipulation, cleaning, and exploration. By utilizing Pandas, we can visualize sales trends and generate insights that inform strategic decisions.

Observations:

- 1 Discount Amount is highly related to Sales Amount, Sales Cost Amount, Sales Amount Based on List Price & Sales Margin Amount and moderately related to Sales Quantity.
- 2- List Price highly related to sales price and has no relations with Sales amount, Sales cost amount, Sales amount based on list price & sales margin amount.
- 3- Sales quantity is moderately related to Sales amount, discount amount, sales margin amount.
- Their is no relation Between Sales Rep and Sales Amount, Sales Margin Amount.

```
[ ] # set style
    sns.set(style = 'darkgrid')
```

```
[ ] DaySalesInsights = sales_data01.copy()
    DaySalesInsights['Invoice_Date'] = pd.to_datetime(sales_data01['Invoice Date']).dt.date
```

```
[ ] top10sales = DaySalesInsights.groupby('Invoice_Date').sum().sort_values('Sales Amount', ascending = False)
    top10sales = top10sales.reset_index().head(10)
```

Yearly Sales Record:

```
[ ] Yearly_Sales =  sales_data02[['CustKey','Item','Invoice Date','Invoice_Year','Invoice_Month',
                                  'Sales Quantity', 'Sales Amount Based on List Price','Discount Amount',
                                 'Sales Amount', 'Sales Margin Amount','Sales Cost Amount','Sales Rep','U/M','List Price',
                                 'Sales Price']]
```

```
[ ] Yearly_Sales01 = Yearly_Sales.groupby('Invoice_Year').sum().reset_index()
```

Key Metrics for Optimization

To optimize sales, focus on key metrics such as **conversion rates**, **customer feedback**, and **inventory turnover**. Analyzing these metrics helps identify areas for improvement and informs strategies to enhance overall sales performance on Amazon.

Implementing Data-Driven Strategies

Once insights are gathered, it's essential to implement **data-driven strategies**. This may include adjusting pricing, enhancing product descriptions, or optimizing advertising campaigns. Continuous monitoring and adaptation are crucial for sustained success in the Amazon marketplace.

Conclusion and Future Steps

In conclusion, optimizing Amazon sales through **NumPy** and **Pandas** provides a competitive edge. By leveraging data analysis, sellers can make informed decisions and adapt to market changes. Future steps include ongoing analysis and refining strategies based on emerging trends.

[ ]
```
High_CostAmount = sales_data01.groupby('Item').sum().sort_values('Sales Cost Amount', ascending=False).reset_index()
High_CostAmount.index+=1
High_CostAmount=High_CostAmount.reset_index().rename(columns={"index":"Rank"})
```

Observations:

- Maximum sales quantities were generated in the unit of measure "EA".

Observations:

- Maximum mean level sales margin amounts were generated in "SE" U/M while minimum mean level of them in "PR" U/M.

Observations:

- As seen from the pairplot above, it is quite clear that list price is very strongly positively correlated with sales price.
- A strong correlation exists between sales amount, sales cost amount, sales margin amount, and sales amount based on list price.
- Sales amount, sales cost amount, and sales margin amount are strongly correlated with discount amount.
- Sales quantity is moderately positively correlated to sales amount, sales cost amount, sales margin amount and sales amount based on list price.
- Sales cost amount and sales margin amount are strongly positively correlated.
- Customer key and sales rep are weakly negatively correlated.
- Sales price and sales quantity are weakly negatively correlated.
- Sales quantity and sales rep are very weakly negatively correlated.
- Sales rep is very weakly negatively correlated to both discount amount and sales cost amount.
- Sales rep is very weakly positively correlated to sales margin amount, in fact we can claim them to be independent of each other as well.
